How did congestion pricing affect NYC ridesharing?

New York City began charging a $1.50 fee on traffic entering Manhattan, below 60th Street, which is referred to as the "Congestion Relief Zone." We analyze full year 2024 vs 2025 across all five boroughs, with a close look at Manhattan: the borough most directly affected by the policy.

Congestion Fee: $1.50, implemented Jan 5, 2025

Congestion Zone: Manhattan, at or below 60th St

-1.5% vs January 2024

Where did congestion pricing have the most impact on pickups?

Rideshare activity grew across most of New York City in 2025, but not everywhere. By analyzing where riders chose to start their trips, we can isolate the fee's effect on outbound demand. Manhattan was the only borough where riders began fewer trips in 2025 than in 2024..

Borough Performance Scorecard - Pickups

Borough	Trip Volume Growth %	Revenue Growth %	Driver Earnings Growth %
Staten Island	7.96	3.71	10.05
Bronx	6.08	-1.64	8.02
Queens	5.45	2.55	7.06
Brooklyn	3.25	-0.66	5.34
Manhattan	-3.27	7.14	1.85

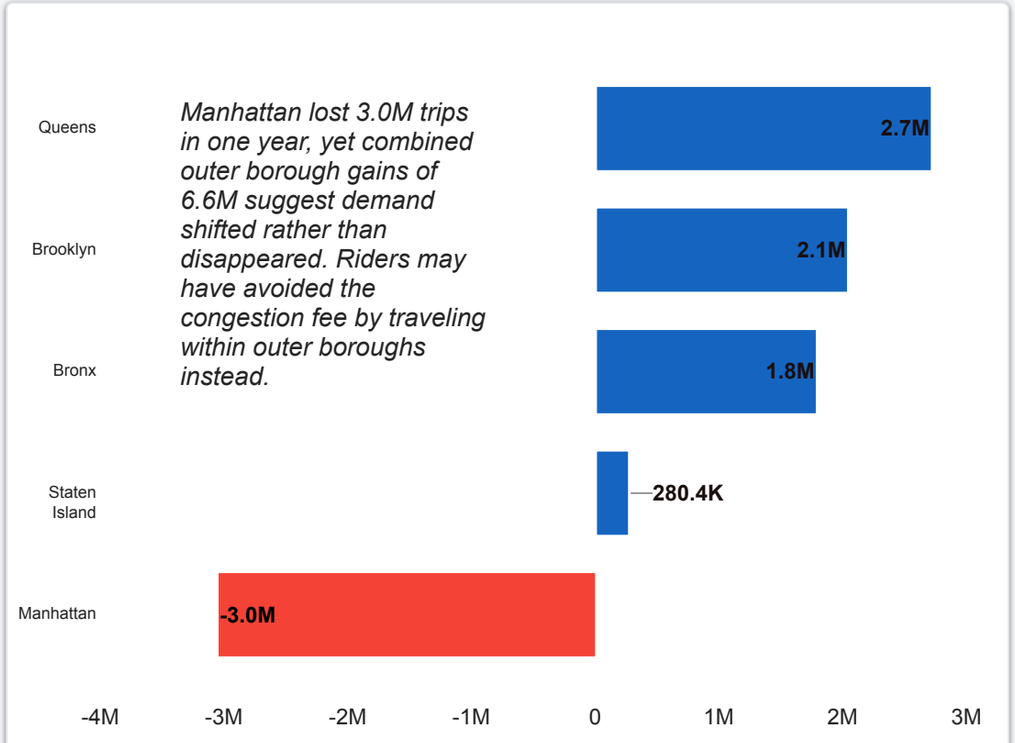
Pickup Volume Change by Borough



Where did congestion pricing have the most impact on drop-offs?

Pickup location tells us where riders started, drop-off location tells us where they went. Analyzing trips by destination gives a clearer picture of inbound demand into the Congestion Relief Zone. If the fee suppressed travel into Manhattan, drop-offs should show a steeper decline than pickups. They do.

Borough Performance Scorecard - Dropoffs

Borough	Drop-Off Volume Growth %	Revenue Growth %	Driver Earnings Growth %
Staten Island	7.17	0.64	8.34
Bronx	5.46	-4.15	6.78
Queens	5.21	6.61	6.45
Brooklyn	3.17	-3.31	5.15
Manhattan	-4.3	6.35	-0.24

When did congestion pricing change rider behavior?

Select Borough

Citywide trip and revenue patterns remained largely consistent with 2024, but the hourly story changes when you zoom into Manhattan. Use the borough filter to see how the congestion zone specifically shifted when and how people rode.
